TPU 95A (thermoplastic polyurethane)

TPU 95A is a semi-flexible material for use in applications that demand the qualities of rubber and plastic.

TPU 95A has a score of 95 on the Shore A Hardness Scale, with an elongation break of up to 580%. TPU 95A is flexible, strong, and can withstand high impacts without deforming or breaking. It is also resistant.

TPU 95A is not recommended for applications that will be exposed to UV light, moisture, or high temperatures for extended periods.
